# Marquette & ISM - Milwaukee Manufacturing Survey- August 2022

Contact: Dr. Marko Bastl Associate Professor of Supply Chain Management Director, Center for Supply Chain Management Marquette University (414) 288-6866 Marko.Bastl@marquette.edu

Released: August 31st, 2022

The Marquette-ISM Report on Manufacturing was prepared by **Onamica Dhar**, graduate student in Applied Economics at Marquette University, and distributed by **Kelly Wesolowski**, Associate Director of the Center for Supply Chain Management.

Please direct data questions and requests for media commentary to Dr. Marko Bastl.

This report should not be confused with the Report On Business<sup>®</sup>, PMI<sup>®</sup>, NMI<sup>®</sup>, published by the Institute of Supply Management<sup>®</sup> (ISM<sup>®</sup>). While a reasonable attempt has been made to remain consistent with the national report, the contents of this report reflect only information pertinent to the southeast Wisconsin and northern Illinois region. This report is not used in the calculation of the national report.

### Summary

Milwaukee-area PMI	August 2022	July 2022	June 2022
Seasonally adjusted	48.00	49.42	58.39

(Milwaukee, Wisconsin) –August's Index registered at 48.00, a decrease from 49.42 in July. August's index indicates negative territory.

### What are respondents saying in August 2022:

- Oil price is still high.
- Lead time increases.
- Labor shortage.
- Production cost increases.

MANUFACTURING AT A GLANCE: August 2022*				
	Series	Series	Percentage	
Index	Index	Index	Point	Direction
	Aug-22	Jul-22	Change	
РМІ	48.00	49.42	-1.4	declining
New Orders	38.31	40.10	-1.8	declining
Production	43.46	42.78	0.7	declining
Employment	54.04	45.25	8.8	growing
Supplier Deliveries	58.84	68.15	-9.3	declining
Inventories	45.35	50.81	-5.5	declining
Customers' Inventories *	42.31	34.62	7.7	declining
Prices *	83.33	84.38	-1.0	growing
Backlog of Orders *	53.57	50.00	3.6	growing
Exports *	66.67	50.00	16.7	growing
Imports *	50.00	44.44	5.6	growing

Important: See explanatory notes on the survey and diffusion index at the end of this report.

(\*) The indices are seasonally adjusted *except for* the Customers' Inventories, Prices, Backlog of Orders, Exports, and Imports Indexes, which do not meet the accepted criteria for seasonal adjustments. **Note**: A reading above 50 percent indicates that the manufacturing economy is generally expanding (**growing**); below 50 percent indicates that it is generally contracting (**declining**). Supplier Deliveries is the one exception, where it is the reversed relationship. Above 50 percent indicates growing.

### What are respondents saying in August 2022:

- Overall, supply chain is easing up.
- New orders are decreasing.
- Lead time for materials is decreasing.
- International transportation is improving.
- Price of good and services are still high.
- Cost of labor and freight cost are increasing.

We have collected input on Blue and White Collar Employment. The indices are below for **August 22**, **July 22**, and **June 2022**,

	Diffusion Index	Diffusion Index	Diffusion Index	Direction	Comments
	August-22	July-22	June-22		
Blue Collar	54.0	51.3	51.2	growing	-
White Collar	54.0	42.2	40.7	growing	-

**Note:** These have been calculated based on the seasonally adjusted (SA) Blue and White Collar indices. A reading above 50 percent indicates that the manufacturing economy is generally expanding (**growing**); below 50 percent indicates that it is generally contracting (**declining**).

### What are respondents saying in August 2022:

- Labor shortage
- Difficult to get qualified employees.
- Wage competition.
- Covid and medical leaves are increasing.

## **Buying Policy**

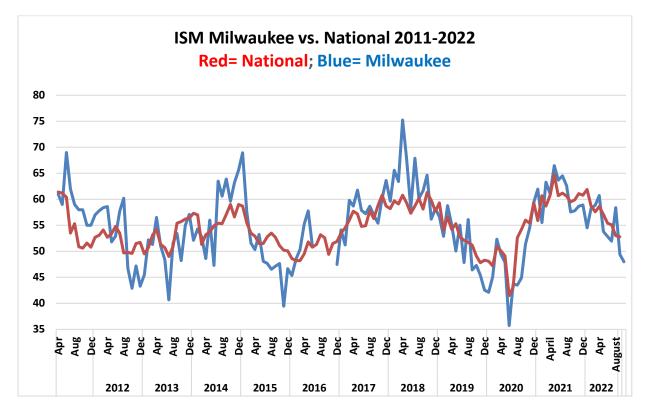

Average commitment lead-time for Capital Expenditures decreased from 173 to 168 days. Average lead-time for Production Materials decreased from 120 to 112 days. Average lead-time for Maintenance, Repair and Operating (MRO) Supplies increased from 45 to 55 days.

### Six- Month Outlook on Business Conditions

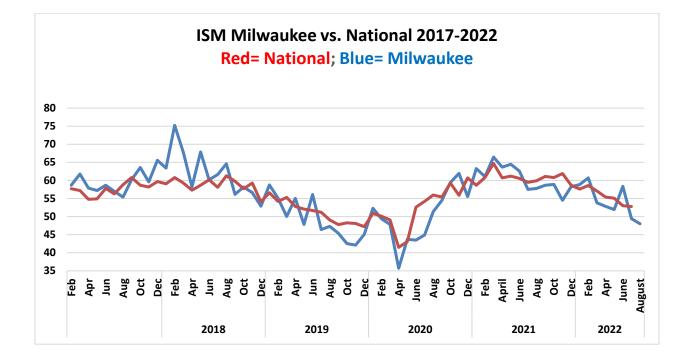

In this outlook, there is a downward shift in positive expectations compared with July and June in terms of market conditions. Approximately 7% of respondents expect positive conditions, 43% expect conditions to remain the same and 50% of the respondents expect conditions to worsen within the next six months.

	Expect Positive Conditions	Expect Same Conditions	Expect Worse Conditions	Diffusion Index
22-Aug	7.14%	42.86%	50.00%	28.57%
22-Jul	18.75%	37.50%	43.75%	37.50%
22-Jun	23.08%	38.46%	38.46%	42.31%

## Insights on the ISM<sup>®</sup> PMI<sup>®</sup> from Institute for Supply Management®:

### Marquette & ISM—Milwaukee Manufacturing Survey Report on Business Background

In February 1982, the PMI<sup>®</sup> was developed by the U.S. Department of Commerce (DOC) and ISM. The index, based on analytical work by the DOC, adjusts five components of the Institute's monthly survey — new orders, production, employment, supplier deliveries and inventories — for normal seasonal variations, applies equal weights to each and then calculates them into a single monthly index number.

An update of research originally done by Theodore S. Torda, the late economist for the DOC, shows a close parallel between growth in real Gross Domestic Product (GDP) and the PMI®. The index can explain about 60 percent of the annual variation in GDP, with a margin of error that averaged ± .48 percent during the last ten years. George McKittrick, an economist at the DOC, said "Not only does the PMI<sup>®</sup> track well with the overall economy, but the indication provided by ISM data about how widespread changes are, complements analogous government series that show size and direction of change."

In January 1989, the Supplier Deliveries Index from the Report became a standard element of the DOC's Bureau of Economic Analysis Index of Leading Economic Indicators. The data was incorporated into the index from June 1976 forward. In January 1996, The Conference Board began compiling this index.

### What Is a Diffusion Index?

Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. The percent response to the "Better," "Same" or "Worse" question is difficult to compare to prior periods. Therefore, the percentages are "diffused" for this purpose. A diffusion index takes those indicating "Better" and half of those indicating "Same" and adds the percentages. This effectively measures the bias toward a positive (above 50 percent) or negative index (below 50 percent). For example, if the response is 20 percent "Better," 70 percent "Same," and 10 percent "Worse," then the diffusion index would be 55 percent ( $20\% + [0.50 \times 70\%]$ ). The data for each question is converted to a diffusion index and then seasonally adjusted.

For each index, a reading above 50 percent indicates expansion of an index, while a reading below 50 percent indicates it is generally declining. And a reading of 50 percent indicates "no change" from the previous month. Supplier Deliveries is an exception. A Supplier Deliveries Index above 50 percent indicates slower deliveries, and below 50 percent indicates faster deliveries.
